SUMMARY

Experienced Software Developer based in Pittsburgh, specializing in Java and the Spring Ecosystem. Skilled in crafting scalable web applications and problem-solving within collaborative teams. Eager to apply my technical prowess and passion for modern development practices to drive impactful business solutions.

EXPERIENCE

Software Developer

Taglogy Tech

📅 2021 - Present 📍 Pittsburgh, PA

- Collaborated with UX/UI designers to enhance and implement responsive, user-friendly interfaces for the online examination system.
- Designed, developed, and maintained critical business applications using Angular and Spring Boot, adhering to industry best practices and design patterns.
- Wrote clean, modular, and testable code using TypeScript, HTML, and CSS to ensure the reliability and scalability of the system.
- Integrated and maintained RESTful APIs and services to facilitate efficient communication between the front end and back end.
- Collaborated with cross-functional teams to solve complex problems and ensure timely delivery of the online examination system to customers.
- Optimized application performance and scalability using advanced techniques like lazy loading, caching, and code-splitting to enhance the user experience.
- Architected scalable Angular components, boosting system adaptability across multiple device platforms.
- Streamlined Spring Boot back-end processes, significantly reducing server response times.

Lead Software Developer

PNC Bank

📅 2017 - 2021 📍 Pittsburgh, PA

- Orchestrated Java-based microservices, optimizing resource allocation and system resilience.
- Developed and maintained a robust test data management system using Java and the Spring Ecosystem, improving productivity across development and testing teams.
- Led the design and implementation of new features for the test data management system, enhancing development efficiency and reducing time-to-market.
- Actively participated in Agile ceremonies, including sprint planning and review sessions, ensuring timely delivery of software products.
- Utilized Jenkins to automate build and deployment processes, enhancing continuous integration and continuous delivery efforts for the test data management system.
- Engineered Jenkins pipelines, achieving a 20% cutback in deployment cycles and enhancing team agility.
- Enhanced Spring security, significantly strengthening the integrity and protection of sensitive test data.

PROJECTS

JMT-Services

'JMT-Services' is a contractor/job organization and management software designed to streamline operations and enhance efficiency. Developed with cutting-edge technologies including Spring Boot, Spring Security, Google Cloud Platform (GCP), Thymeleaf, Keycloak, Bootstrap, and WebFlux, it stands as a testament to modern software architecture. Embracing a reactive approach with WebFlux, JMT-Services guarantees responsiveness and the ability to scale in accordance with any demand. Its infrastructure, fully containerized on GCP and orchestrated with a comprehensive CI/CD pipeline via GitHub Actions, ensures continuous integration and deployment, facilitating rapid scaling from zero to handling large volumes with ease and precision.
